1. Claim 18 is objected to because of the following informalities:

Claimed 18 is objected to for incongruent titling. The claim title is “a cutting head”, and yet the body of the claim positively recites a machine frame, which is not part of the cutting head. To correct this, line 1 should read –A slicing machine having a cutting head having a drive shaft, said machine having.....-- Note that this change would make claim 34 redundant.

Appropriate correction is required.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 18-20 and 34 are rejected under 35 U.S.C. 102(b) as being anticipated by Guild et al.(4,380,945), who shows a slicing machine having all of the recited limitations including;

A machine frame (21, etc.),

A drive shaft (section inside pinion 54),

A rotor (51,52) having a housing (52) and non-rotatably attached spindle (51) arranged eccentrically to the drive shaft,

A blade (20) having a bearing (68a) in the plane of the blade.

4. Applicant's arguments have been fully considered but they are not persuasive.

Applicant argues that *“There is no disclosure whatsoever in Guild that the rotor and the housing rotate at the same speed as the shaft, where the rotation of the blade is independent from the rotation of the housing and the blade moves on a planetary path”*.

Contrary to Applicant's statement, Guild's rotor (51,52) and housing (52) are integral with the drive shaft (shaft inside pinion 54), so of course they rotate at the same speed.

Also contrary to Applicant's statement, Guild's blade (20) *does* rotate independently of the housing (52). As seen in figure 4, the blade 20 is mounted for free rotation about the spindle 51, and the blade is driven by engagement with the work. Examiner notes that claims 18-20 and 34 do not recite any drive mechanism connected to drive the blade separately.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3724

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
